is a topic of much interest ... Stone fruit are one of our favorite types of fruit. From peaches to plums, cherries to hybrids, there are a lot of options out there. Pruning is a critical part of maintaining a healthy stone fruit tree. Proper pruning techniques can help you maximize your yield and keep your trees healthy and productive. There are several common pruning mistakes that can lead to reduced yields and even tree death. In this article, we will discuss four of the most common pruning mistakes and how to avoid them. 1. Pruning too early or too late. Pruning should be done during the dormant season, typically between late winter and early spring. Pruning too early or too late can stress the tree and reduce its ability to heal wounds. 2. Pruning too close to the trunk. Leaving stubs or leaving cuts too close to the trunk can lead to decay and dieback. Always make clean, diagonal cuts just outside the branch collar. 3. Pruning too heavily. Removing more than 25% of the canopy in a single year can severely stress the tree and reduce its ability to produce fruit. Prune in stages over several years. 4. Pruning the wrong way. Pruning should be done using sharp, clean tools. Always make clean, diagonal cuts. Avoid using dull tools or making jagged cuts. Pruning is an essential part of stone fruit tree care. By following these guidelines, you can avoid the most common pruning mistakes and keep your trees healthy and productive for years to come.
