4. Contextual Analysis (Continued)

Continuing our detailed review of Ms 52 Basics, we examine secondary source materials and community-driven data points:

One of my favorite fun facts to share with someone is how no matter how implausible it seems, every time you shuffle a deck of cards, you are more likely to get the same order as the deck you started with than you are to get a different order. This is because there are so many possible combinations of cards that the chance of getting a specific one is very small. For example, if you have a deck of 52 cards, there are 52! (52 factorial) possible orders. That's a really big number! So, the chance of getting a specific order is 1 in 52!, which is a very small probability. This is why it's so surprising when you shuffle a deck and get the same order as you started with. It's not just a fun fact, it's a great example of how probability works in the real world.
